

THORNDOWN

## WOOD PAINT FEATURES

Thorndown was founded on the principles of quality, innovation, design and simplicity. We set about creating the best paint product that performs brilliantly and is simple to use.

**High-performing** – using raw materials that are at the cutting edge of water-based paint technology, our Wood Paint has been designed to be one of the best on the market.

We use one of the best **acrylic resins** at a high level to make sure the paint coating is water-repellent, flexible, hard-wearing and long-lasting.

VOC free architectural **exterior-grade colour pigments** are used to make sure that the colour you buy is the colour you see years later. These colour pigments are very high quality and perform at the highest levels in lightfast and weather-resistance tests.

The paint has also been designed to hold on to the brush and flow well.

**Simplicity** – rather than having four or more different wood paints to have to choose from, we make **ONE Wood Paint** that ‘Works On Any Wood, Anywhere’. Thorndown Wood Paint can be painted on any wood whether it be softwood, hardwood, pressure-treated, rough-sawn or planed. If it’s wood you can paint it! And it paints metal, masonry, terracotta and uPVC.

The Wood Paint was engineered specifically for **exterior** use so it is highly water-repellent and hard-wearing, meaning that it can stand up to years of abuse from the British weather. This also makes it perfect for use on all types of **interior** wood from kitchen units, wood panelling, window frames, doors and furniture. If the paint coating can stand up to torrents of rain outside then just imagine how well it performs on wood panelling in a bathroom!

The resin we use is self-priming so in most cases, you don’t need to use a primer and can just paint the wood paint on to your wood. One coat is all you need for fencing or simple projects. Two coats are essential for exterior-use and to create the ultimate long-lasting coating. Three coats are preferable for certain colours such as whites, creams and off-whites.

**The Environment** – Thorndown Wood Paint is formulated using raw materials with virtually no VOCs (volatile organic compounds) that can be bad for you and the environment. There is virtually no odour so painting is a pleasure and you won’t be knocked out by strong fumes when painting inside.

Being water-based it is easy to clean brushes and implements with just water, and as the paint dries, only water evaporates out into the environment. Thorndown Wood Paint has been designed to work really well, protecting and extending the life of wood products with minimal negative effect on the environment.
